

QUARTZITE

Blue Lava

Type	Quartzite
Finish	Polished
Color family	Blue
Origin	Brazil
Sealing	Confirm requirements for the selected stone

Blue Lava is a Brazilian quartzite carried by MSI, quarried in Brazil and known for a cool-blue background streaked with dark blue and orange veining. It formed through metamorphism, when an ancient quartz sandstone was recrystallized under heat and pressure into a dense, interlocking quartz rock that is harder and more scratch- and etch-resistant than granite. The name 'Blue Lava' evokes the molten, flowing look of its fiery orange veins running through cool blue stone.

CARE & INSTALLATION

Clean with warm water and a stone-safe cleaner; wipe spills promptly and use trivets. Sealing needs depend on the selected stone and its use; confirm the care schedule with us. Slab movement and tone vary from swatches. Confirm the actual slab, finish and thickness before fabrication.
