

QUARTZITE

Crytos

Type	Quartzite
Finish	Polished
Color family	Black
Origin	Brazil
Sealing	Confirm requirements for the selected stone

Crytos is a Brazilian quartzite carried by MSI, quarried in Brazil and recognizable by a black backdrop scattered with multicolored pops of terracotta, graphite, and blush tones. Geologically it is a quartzite, formed when a quartz-rich sandstone recrystallized under deep heat and pressure into a stone harder than granite and highly resistant to scratching and acid etching. 'Crytos' is a coined trade name with a crystalline, exotic feel rather than a geographic reference.

CARE & INSTALLATION

Clean with warm water and a stone-safe cleaner; wipe spills promptly and use trivets. Sealing needs depend on the selected stone and its use; confirm the care schedule with us. Slab movement and tone vary from swatches. Confirm the actual slab, finish and thickness before fabrication.
