

QUARTZITE

Florida Wave

Type	Quartzite
Finish	Polished
Color family	White
Origin	Brazil
Sealing	Confirm requirements for the selected stone

Florida Wave is a Brazilian quartzite distributed by MSI, quarried in Brazil and known for creamy whites and soft grays threaded with delicate charcoal veins. It is a metamorphic quartzite, formed when an ancient quartz sandstone recrystallized under heat and pressure into a hard, interlocking quartz rock that outperforms granite in scratch and etch resistance. The name 'Florida Wave' evokes the gentle, wave-like flow of its soft veining rather than a geographic source.

CARE & INSTALLATION

Clean with warm water and a stone-safe cleaner; wipe spills promptly and use trivets. Sealing needs depend on the selected stone and its use; confirm the care schedule with us. Slab movement and tone vary from swatches. Confirm the actual slab, finish and thickness before fabrication.
