

QUARTZITE

Fusion

Type	Quartzite
Finish	Polished
Color family	Black
Origin	Brazil
Sealing	Confirm requirements for the selected stone

Fusion is a Brazilian quartzite carried by MSI, quarried in Brazil and known for a dramatic blend of deep bluish-grays, creams, and rust hues. Geologically it is a quartzite, formed when quartz-rich sandstone recrystallized under heat and pressure into a dense, hard stone with excellent scratch and etch resistance, surpassing granite. The name 'Fusion' refers to the way its many colors appear melded or fused together across the slab.

CARE & INSTALLATION

Clean with warm water and a stone-safe cleaner; wipe spills promptly and use trivets. Sealing needs depend on the selected stone and its use; confirm the care schedule with us. Slab movement and tone vary from swatches. Confirm the actual slab, finish and thickness before fabrication.
