

QUARTZITE

Galapagos

Type	Quartzite
Finish	Polished
Color family	Black
Origin	Brazil
Sealing	Confirm requirements for the selected stone

Galapagos is a Brazilian quartzite distributed by MSI, quarried in Brazil and recognizable by a grey-green background crossed with thick waves of black and steel-gray striations. It is a true quartzite, formed when an ancient quartz sandstone recrystallized under heat and pressure into a hard, interlocking quartz matrix that resists scratching and etching better than granite. The name 'Galapagos' evokes the dramatic, untamed landscapes of the Galapagos Islands rather than the stone's Brazilian origin.

CARE & INSTALLATION

Clean with warm water and a stone-safe cleaner; wipe spills promptly and use trivets. Sealing needs depend on the selected stone and its use; confirm the care schedule with us. Slab movement and tone vary from swatches. Confirm the actual slab, finish and thickness before fabrication.
