

QUARTZITE

Glacier Wave

Type	Quartzite
Finish	Polished
Color family	Gray
Origin	Brazil
Sealing	Confirm requirements for the selected stone

Glacier Wave is a Brazilian quartzite offered by MSI, quarried in Brazil and known for a soft dove-gray color with subtle tone-on-tone waves. As a quartzite it formed when quartz-rich sandstone recrystallized under heat and pressure into a dense, hard stone with strong resistance to scratching and etching, and it is durable enough to withstand freezing climates. The name 'Glacier Wave' evokes the cool, rippling look of glacial ice rather than a geographic source.

CARE & INSTALLATION

Clean with warm water and a stone-safe cleaner; wipe spills promptly and use trivets. Sealing needs depend on the selected stone and its use; confirm the care schedule with us. Slab movement and tone vary from swatches. Confirm the actual slab, finish and thickness before fabrication.
